Bubba's Brain Teaser

Answer will be printed in the next issue of Concrete Today.

Question:

A customer at a 7-11 store selected four items to buy, and was told that the cost was \$7.11. He was curious that the cost was the same as the store name, so he inquired as to how the figure was derived. The clerk said that he had simply multiplied the prices of the four individual items.

The customer protested that the four prices should have been ADDED, not MULTIPLIED. The clerk said that that was OK with him, but, the result was still the same: exactly \$7.11.

What was the cost of the four items?

Answer to the last issue's brain teaser:

Six people go into a store through the underground car parking garage using an elevator going to floors 1, 2, 3, 4, 5 and 6. Each person goes to a different floor in the same elevator, which goes up stopping at each floor. Eddie's ride is the longest. Angie gets out before Frankie but after Debbie. Charlie gets out first. Barbie leaves before Debbie, who leaves at the third floor.

At what floor does each person leave?

ANSWER: Charlie leaves at the 1st floor.

Barbie leaves at the 2nd floor.

Debbie leaves at the 3rd floor.

Angie leaves at the 4th floor.

Frankie leaves at the 5th floor.

Eddie leaves at the 6th floor.
